

THE REAL IN LINE BRIX/CO₂ analyzer for beverages

The beverage analyzer IB07 is the only 100% in line system able to measure accurately Bx and CO₂ of any regular carbonated beverage including fruit juice with fibers, energy drinks and mineral waters.

The equipment is based on optical technology: refractive index for Bx measurement and infrared for CO₂ one.

Both analyzers do not have any drift in the time so that the Maselli IB07 acts like a "black box" which does not need any adjustment vs the laboratory: after the initial configuration during start up, the operators in the plant do not have to touch the system anymore.

The Maselli IB07 may be delivered in 3 different configurations: only Bx, only CO₂ or the combination Bx/CO₂ but, in any case, the installation can be easily made by means of 1 single Varivent fitting.

Due to the optical technology, the equipment is virtually no maintenance reducing drastically the ownership costs.
